Who we are:

Sveneby Säteri, built in the 18th century, where we work to create a recreation & health center located in scenic western Götaland next to Lake Östen, which is a nature conservation area with rich bird life. We are building a self-sufficient independent Eco Village with organic cultivations of basic products and other vital functions.

Sveneby Eco Village offers various physical and spiritual training programs to increase human consciousness, education, conversations, and information about physical and spiritual realities that are often misunderstood by many.

We offer accommodation in our environment for those who want to learn more about the future way of living healthy and at the same time get treatments for physical, mental and spiritual damage.

We offer modern accommodation in forests and nature with lake views for electricity allergy sufferers, without electricity and with minimal electromagnetic radiation.

We strive to be as self-sufficient as possible, use renewable resources and function cleanly yet preserve the biological diversity that nature offers. We offer our guests a healthy alternative, to the industrialized foods that often contain unsuitable raw materials, to maintain good health.

Ecological Thinking

Ecological thinking is about nurturing natural resources in the long term, so that they can continue to provide humanity and future generations with what is needed.

Sustainable development consists of three dimensions: social thinking, economic thinking, and ecological thinking. The dimension of ecological thinking is based on knowledge of what strain humans and ecosystems can withstand and how we can avoid damage.

Lake Östen

Lake Östen, which is adjacent to and partly belongs to **Sveneby Eco Village**, is one of the country's most valuable bird lakes and an important resting place for geese, swans, ducks, cranes, and waders during their movement.

The lake is a nature conservation area which can offer calm boat trips without engines, fishing, and swimming both summer and winter.

Spring Water

Sveneby Eco Village has its own deep-drilled wells for drinking water, which supplies all buildings with cold, fresh, clean water. We also have our own sewer systems in the village.

Forest & Nature

Sveneby Eco Village has its own large forests with several scenic hiking trails and arable land. There are large hunting grounds with hunting for future needs for food and own meat supply for the Eco Village.

Solar Power

Sveneby Eco Village has its own solar energy supply for the entire facility. When the electricity supply in society fails, we have our own electricity for our entire Village.

Hunting & Fishing

Sveneby Eco Village has its own hunting ground to be able to contribute with the food supply for the Village. We have plans to open a Garden Shop, Serving food, as well as having a Slaughterhouse and Freezer in our own premises.

We also plan to have access to precious fishing for household needs.

Sveneby Church

Sveneby church belongs to Fägre parish, is part of Töreboda pastorate which is located in Töreboda municipality. The building was built in the 12th century and is in Romanesque style.

The church is located within **Sveneby Eco Village** area and can be used freely for weddings and other events.

Sveneby School

Sveneby Eco Village has plans to reopen Sveneby School as a primary school for up to 15 students. From the beginning of compulsory schooling, Sveneby belonged to Hjalstad's school district. In 1883, the primary school

building was built. In 1912, Sveneby became its own school district and in 1918, the schoolhouse was built so that a primary school could also be run. In the main hall, grades 3,4,5 and 6 were taught and in the extended part that is currently used as a kitchen, grades 1 and 2 were taught.

Sveneby Croft Village

Sveneby Eco Village has several newly renovated crofts with all modernity's but without electricity with low mobile electromagnetic radiation. The crofts are insulated for use all year round and are heated by wood-burning stoves and wood stoves in the kitchen.

Other functions available in the crofts are cold and hot water, shower, toilet and cooking facilities with gas. All crofts are located in a protected forest with lake view of Lake Östen. Each croft has two beds in a room & kitchen with a new bathroom.

The view from the croft is charming with absolute silence from city life. Only birds, such as cranes, eagles and small birds are in abundance.

Sveneby Fruit Garden

Sveneby Eco Village has a garden with apples, pears and cherry trees, to be able to offer local grown fruit, juice and puree to the Village and our guests.

Sveneby Data Center

In order to be secure, self-sufficient and independent of external data centers, **Sveneby Eco Village** has its own data center, connected to the internet for communication between members and trusted

employees. We currently have a fiber connection to the internet, but we have also prepared our own connection to internet communication with the new satellites in the Starlink-network.

Sveneby Mechanical Workshop

To be prepared, **Sveneby Eco Village** has its own mechanical workshop which is used to adapt and repair all machines used at the Village. There is everything needed as lathe and milling cutter machines and welding equipment.

International partners

Sveneby Eco Village is partner and co-operate with **Global Mercy Operation (GMO)**, an independent international aid organization working in 160 countries, offices in Florida and London.

GMO consists of a group of experienced professionals with more than 35 years of experience in social welfare programs and humanitarian projects around the world. For more information on GMOs, download the [brochure here](#) or go to www.globalmercyoperation.com

World Economic Congress (WEC) is an independent organization from **Zimbabwe** that offers training in leadership, business, business ethics and economics.

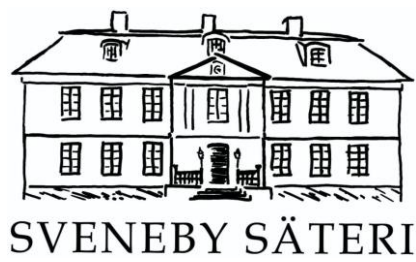

Sveneby Eco Village is partner and co-operates through WEC with an international payment system based on gold. Everyone gets a free gold account that reflects the known currency of the country in which the member lives.

The payment system is called the **Divine Economic Empowerment Council, (DEEC)** and has been launched since 2015 in most countries. For more information on this payment system, download the [brochure here](#) or go to www.divineeconomic.com

Those who use the payment system are members of DeeC and thus free from bank licenses to make crossborder payments in gold. The gold is located in recognized gold deposits or in the ground with approved geological surveys.
